

BEACH BB-OC2 PRODUCT INFORMATION

The Beach Filter Products oil coalescing breather provides 2-micron filtration for gear-driven pumps & other applications that emit oil mist. The BB-OC2 offers two-fold benefits by protecting both system lubricants & the environment.

Linear Measure: $\frac{\text{Inch}}{\text{millimeter}}$

Filter Efficiency

The BB-OC2 retains particulate matter down to 2-microns. This level exceeds most industry standards and far surpasses that of standard breather caps or pop-off valves.

Environmental Proficiency

The OC-2 provides health, safety, and environmental benefits by prohibiting entry of oil mist into the ambient air. Coalesced oil is also recycled back into the system.

Features:

- Protection to 2-micron absolute
- Airflow rating of 5 cfm
- Patented airflow design
- Durable construction
- Standard 3/8" male connector
- Average lifespan of 6 months
- Environmentally safe disposal

Benefits:

- Eliminates oil mist
- Protects the environment
- Prohibits entry of abrasive contaminants into system
- Reduces unnecessary wear & tear on equipment, prolongs life
- Extends lubricant life by keeping oils free of particulate
- Recycles coalesced oil back into the system
- Eliminates clean-up procedures due to oil droplets reaching the floor

TECH SPECS

General Data

| | |
|--------------------------|----------------------------------|
| Element model | BB-OC2 |
| Unit size | 2.825 in. tall, 2.5 in. diameter |
| Filtration area | 25 sq.in. |
| Max. permissible flow | 5 cfm |
| Net weight of unit | .25 lbs. |
| Micron rating/efficiency | 2/100% |
| Direction of flow | Out-In & In-out |
| Op. temp. range | -20° to +250° F |

Filter Media

| | |
|----------|--|
| Material | Polyester Foam/ Microglass Coalescing Media |
|----------|--|

Unit Material Data

| | |
|------------------|---------------|
| Material* | Polypropylene |
| Max. op. temp. | 250° F |
| Melting point | 350° F |
| Tensile strength | 8000 psi |

* Resistant to acids, alkalides, solvents, all mineral & synthetic lubricants
