

These breathers are designed to filter out particles and block water in its liquid state from entering fluid containing reservoirs. The BB-SB-35 offers the added feature of an oil coalescing layer to prevent oil mist from entering the work environment.

Provides the ideal solution for low humidity applications; continuous operations with frequent washdowns; and arid, high dust environments. Also offers excellent protection for water-based fluids.

Features/Benefits:

- Creates an impenetrable barrier against water droplets
- Pleated element provides a large surface area and is 99.5% efficient in blocking particles 1 μ and larger
- Coalesces oil mist, preventing contamination of working environment (BB-SB-35 only)
- Visual vacuum indicator option actuates when maximum restriction has been reached
- Rugged ABS plastic housing
- Easy installation requires hand tighten only

BB-SB-25

BB-SB-35

MODEL NUMBER	BB-SB-25	BB-SB-35
Unit size (height x dia., in.)	5 x 5	5 x 5
Filtration area (square in.)	180	180
Max. flow rate (cfm @ 1 psid)	40	40
Beta rating	$\beta_1 = 200$ (99.5% efficient at 1 μ)	$\beta_1 = 200$ (99.5% efficient at 1 μ)
Operating temperature range (°F)	-20 to +200	-20 to +200
Filter media	ePTFE/Polyester	ePTFE/Polyester

Flange, field, and threaded adapters are available for mounting. Hand tighten only. Replace 1x/year or when indicated by vacuum indicator option.
