

BEACH FILTERS *Clear The Air*

T-Line Compressed Air Filter Case Study

Customer:
Automatic Injection Molders

Product Used:
Beach T60 Compressed Air Filter

Application: Customatic, Inc., a precision engineered plastic moldings manufacturer located in Worcester Massachusetts, produces plastic parts for many diverse industries. They found they had to stop their machines to clean the molds due to a buildup of rust, caused by moisture in their air lines. A Beach F-T60C filter solved the moisture problem. This delivered immediate cost savings by elimination of downtime and adding life to their molds via reduced pitting.

Beach T-Line Filters Keep Compressed Air Clean and Dry

Beach T-line filters are our most effective and efficient design for Point-Of-Use compressed air filtration with triple stage filtration, rapid servicing and clear view polyurethane bowl.

Mechanical separation followed by a coalescing element removes large particles, oil and water vapor. Then a replaceable desiccant element removes the remaining hydrocarbon vapors, moisture and particulates down to 0.3 microns.

Convenience: The T-lines can be serviced in minutes - coalescing element cleaned, new desiccant element installed and without breaking apart the lines.

Range of applications: The T-line models F-T20C, F-T40C, and F-T60C are 3-stage filters for compressed air and gases rated from 20 to 60scfm at 100 psi. The F-T20C acetyl head and the F-T40C and F-T60C aluminum heads are rated to 250psi maximum operating pressure. Polyclear II®* polyurethane plastic bowls have excellent resistance to synthetic compressor oils/lubricants, hydrocarbons, solvents, acids and other chemicals and offer excellent UV resistance for outdoor applications.

In addition to our recommended clay desiccant elements, silica gel and carbon desiccants are available.
