A Newsletter from Beach Filter Products, Inc., of Glen Rock, PA

Say Goodbye to Moisture with Beach Filters NEW! MoistureBloc™

or applications requiring complete protection from moisture in compressed air, Beach Filters introduces its newest product — MoistureBloc™:

- completely blocks all moisture
- provides significant cost savings
- speeds filter change

If your application is sensitive to moisture, you'll be thrilled with our new $Moisture Bloc^{TM}$.

Absolutely no moisture gets through this new filter. That means even when it becomes saturated, it blinds, or plugs, allowing no moisture or water to pass through the element. Thus, MoistureBloc $^{\text{m}}$ improves quality and eliminates costly rework due to moisture defects. It also increases stability in applications like plasma cutting, and offers cost savings in consumable parts by over two times versus unfiltered air.

Filter change reduces downtime

Because the element does not gradually degrade, it won't cause downstream defects. Simply inspect the filter monthly and replace if necessary. *The whole process takes only two minutes and requires no tools*, so you don't lose costly production time.

Extra protection with the Tandem

We've designed the MoistureBloc™ Tandem unit with a pair of filters to make filter changing easier and quicker. Our innovative tandem shuttle and exhaust valve arrangement enables instant change over, which means less downtime. When one of the units is saturated with moisture, it blinds, completely blocking the airflow to prevent damage to tools and quality. It will switch automatically (or manually if you prefer) to the unused side of the tandem.

Each tandem unit comes with two elements, two o-rings, and connector hose. Uncontaminated elements can be dried out and reused. Please refer to our fact sheet for information on how to inspect and change the MoistureBloc $^{\text{\tiny M}}$ element.

When to use MoistureBloc™

At Beach Filters, we've been providing point-of-use dessicant compressed air filters for over 60 years. Our newest 25 scfm product, MoistureBloc $^{\text{\tiny{TM}}}$, is a must where moisture-related defects are costly, as in welding and painting departments.

Breathers Available in Smaller Quantities

Need to restock, but don't need an entire case? Disposable breathers can now be ordered in minimums of six per case.

Product Improvements

In the area of continuous improvement, we have made the following updates —

New look

This past winter we modified the F-GGC filter mold with four slots on the head and switched to a new o-ring to improve our assembly process.

Easier installation

This spring we switched our F-T40C and F-T60C T-line filters back to aluminum heads to eliminate the torque specification during field installation.

New Reach on the Web

For more leads, visit us at Globalspec.com, The Engineering Search EngineSM, the vertical search engine with over one million registered engineers and specifiers, the real buyers!

Continued from front.

Because this moisture-blocking filter system eliminates moisture completely, there are fewer moisture-related defects and therefore less rework. In addition, the moisture-free environment MoistureBloc $^{\text{TM}}$ provides extends the service life of mechanical components.

Preliminary testing and positive feedback on our newest product, MoistureBloc™, confirm its effectiveness and ease of use.

MoistureBloc™ Resources

We have MoistureBloc™ selling and specification sheets available for your use as well as pricing sheets. Please contact Tim Bollinger, general manager, by phone at (800) 232-2485 or by email at beachsta-dritb@adelphia.net for more information or to request these materials.

New Resources on our Website

We've recently added a case studies section to our website. Here you can learn more about successful uses of Beach Filters' products and how they have helped to solve numerous problems for customers. Visit www.beachfilters.com to learn more.

Success Stories Bring Great-tasting Rewards

Do you have a story to tell? Submit it to Beach Filters. If we publish it in an upcoming newsletter, we'll send you a \$50 gift certificate for Omaha Steaks.

The Clear Choice for Point-of-Use Compressed Air & Gas Filters
