Clear The Air

Breathers

The Standard for Disposable Breathers

Used in most hydraulic oil reservoirs and small storage tanks, Beach's Disposable Hygroscopic Breather is the backbone to our breather line. It's state-of-the-art design and function assures maximum machine performance. Adaptation to virtually any system and dispersion of air evenly over filter media and silica gel solidifies our disposable breathers as industry leaders. With 3 micron filtration and up to 16cfm for the product line, this breather line is the very best in quality performance and value.

Extending Values

Using the latest in design and quality performance improvements, the Beach Extended Series Breather is a powerhouse of desiccant ingenuity. A larger housing allows for more desiccant, up to 4.2 lbs., giving this breather a longer life and higher airflow that tops out at 27cfm. With check-value technology and a patented oil mist reducer, the breather is given a new standard of reliability.

Lubrication Best Practices

Breathers aren't the only form of protection for critical assets Beach can provide. With access to an extensive library of equipment solutions, we can ensure your customer's equipment is always up and running. Modifications to seal and protect gearboxes, pumps, hydraulic filters, etc. will reduce costly burdens customers desperately want to avoid. Contact us for more on lubrication best practice solutions we can provide you.

Breathers In Action

Fluid Power Journal has a great article on breathers in action at wind farms. Follow the link below to read about some great ways you can help customers execute lubrication best practices.
