

BEACH
FILTERS*Clear The Air*

CHANGE IS IN THE AIR

A filter element that's exhausted can't keep your equipment in peak condition. It's best practice to check and/or replace your front line of defense every 3 to 6 months. All filter elements and breathers need to be properly maintained to protect you and your most valuable assets.

Beach Desiccant Filter Elements:

- Particulate Filtration to .3 micron
- Eliminate Moisture and Hydrocarbon Vapors
- Desiccants available for all housings
 - Standard Clay
 - Silica Gel
 - Carbon
 - Custom

Filter housings need maintenance too and you can refresh any housing unit to increase safety and efficiency.

Inquire about our maintenance kits that include replacement o-rings, scrubbers, and elements.

It might be pretty in PINK, but that's a sure sign your breather is needing to be replaced.

Check for any color change in all Beach Breather Products: Standard disposables, AquaGuard low flow, Extreme Duty, Extended Series, and Re-buildable Steel

Breather selection guide to find the best option for your customer:
